Poynter.

ThingLink.com: Tag your photos with an interactive link, then embed or share on social media. (Free)

Vidometer: app embeds a street map or satellite map on your video while you record. Great for breaking news.

This is my favorite website to find metadata on images. Drag image or just add url and it will search and map

juxtapose.knightlab.com: build a before and after slider for sill photos (Free)

Descript.com: a website that transcribes audio then allows you to edit by just editing the text. (Free)

Adobe Spark: Create custom graphics for social, online, presentations. Use their designs or customize. Use their free photos and backgrounds or load your own. Spark is also great for videos.

 ★★★★★ 4.8, 143.3K Ratings
 Free · Offers In-App Purchases

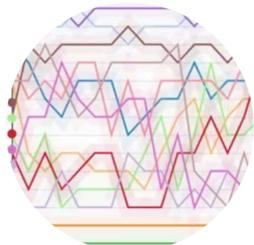

Photomath: an app that allows you to photograph an equation and it solves it for you. (Free)

Infogr.am: Build sophisticated looking charts, and graphics with data you supply or upload. Truly marvelous! (Free)

BatchGeo.com: a free website that maps data for you. Drag /drop data files. Files include a location cell.

Animated storytelling

Guide an audience through your data to explain it, online or in person.

Google Flourish: flourish.studio is a Google website that turns data into motion graphics. No coding.

mapchecking.com: This website tells you how many people will fit into a space that you define. You can set density from crowded to sparse. (Free)

Mojo: app that places text and animations over images and video. Many free templates, others for premium.
